## Laying the background: Fermented foods and Microorganisms

## Laying the background: Fermented foods and Microorganisms

**Shelf life  
Nutritional Value  
Organoleptic characteristics**

**Fermented foods**

# Laying the background: Fermented foods and Microorganisms

Traditionally fermented dairies

Fermenting ecosystem

Experimental dairy production

## Basic Research

- taxonomy
- metabolism
- physiology
- genetics and genomics
- bioinformatics

## Technological properties

- flavour bio-generation
- bio-texturant molecule development
- bio-preserved molecule production (antimicrobial peptides)
- probiotics

## Laying the background: Fermented foods and Microorganisms

- Lactic Acid Bacteria: Gram-positive, low-GC, rods or cocci, non-sporulating, catalase-negative, aerotolerant but not aerophilic and they produce lactic acid as the major metabolic end-product of carbohydrate fermentation
  - **Carnobacterium**
  - **Enterococcus**
  - **Lactococcus**
  - **Lactobacillus**
  - **Leuconostoc**
  - **Oenococcus**
  - **Pediococcus**
  - **Streptococcus** ←
  - **Weissella**

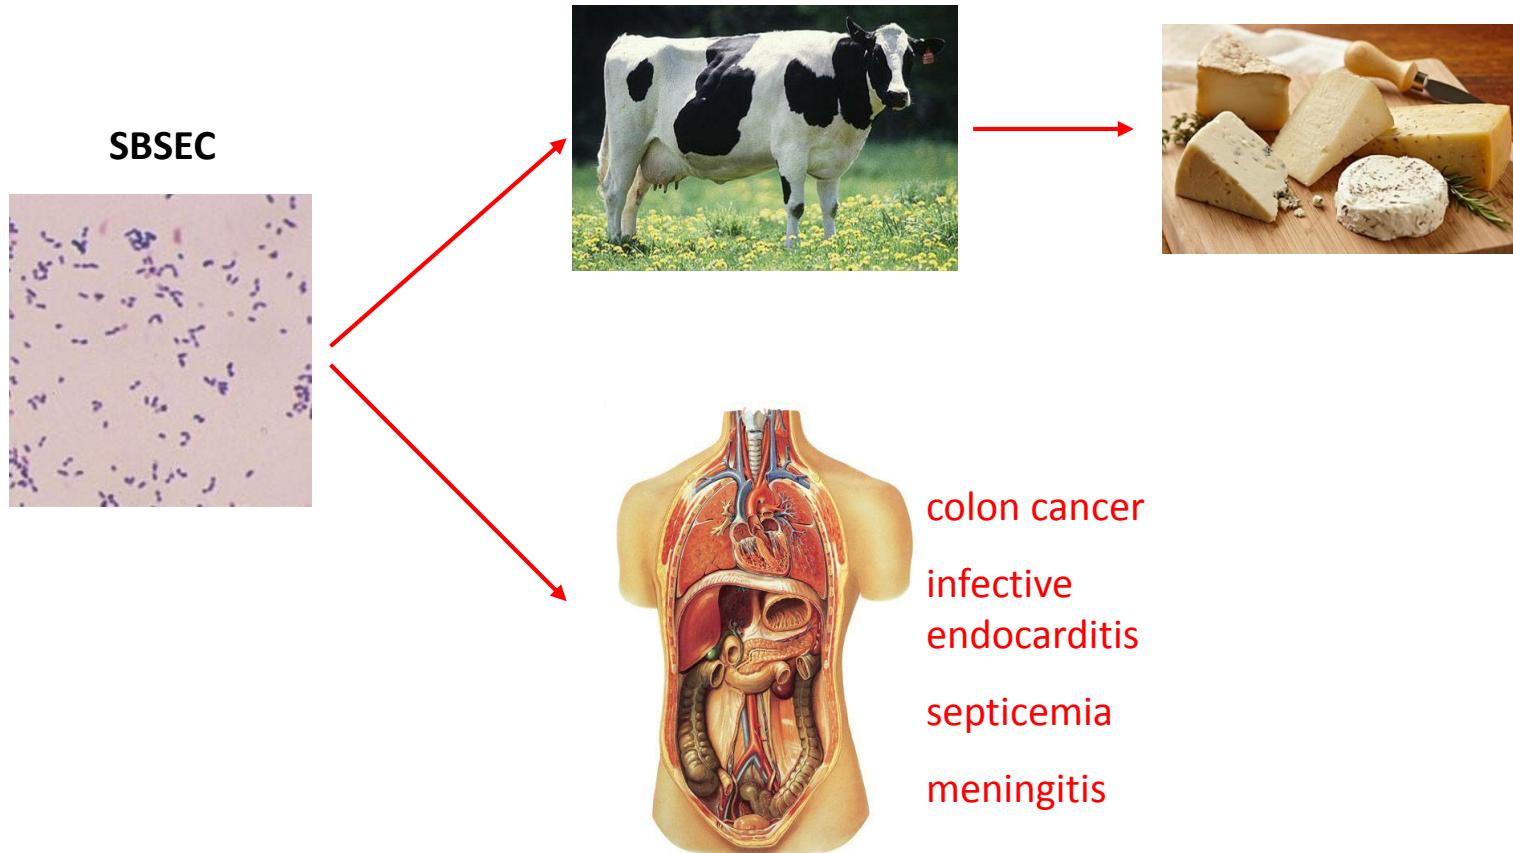

## Laying the background: Fermented foods and Microorganisms

- The *Streptococcus* genus (*sensu stricto*) mainly consists of commensals of humans and animals including both non-pathogenic and pathogenic bacteria
- *Streptococcus thermophilus* is the only species in the genus used as a starter culture in food fermentations since all known lactic streptococci belong now to the *Lactococcus* genus
- *Streptococcus macedonicus* which was originally isolated and characterized from traditional Greek Kasseri cheese (Tsakalidou et. al. Int J Syst Bacteriol. 1998) and seems to have milk and dairy products as its primary ecological niche (De Vuyst and Tsakalidou Int Dairy J. 2008).

## Laying the background: Fermented foods and Microorganisms

- Streptococci that can be found growing in milk belong to the *Streptococcus bovis/Streptococcus equinus* complex (SBSEC)

## Sequencing the genome of *S. macedonicus* ACA-DC 198

The aim of this work was to sequence the complete genome of the dairy isolate *S. macedonicus* ACA-DC 198 in order to assess *in silico* its adaptation to the milk environment and its pathogenic potential

# **Assessing the adaptation to milk and the pathogenic potential of the dairy *Streptococcus macedonicus* ACA-DC 198 through comparative genomics**

**A. Complete genome sequencing and annotation of *S. macedonicus***

**B. Comparative genomics of *S. macedonicus* against related streptococci**

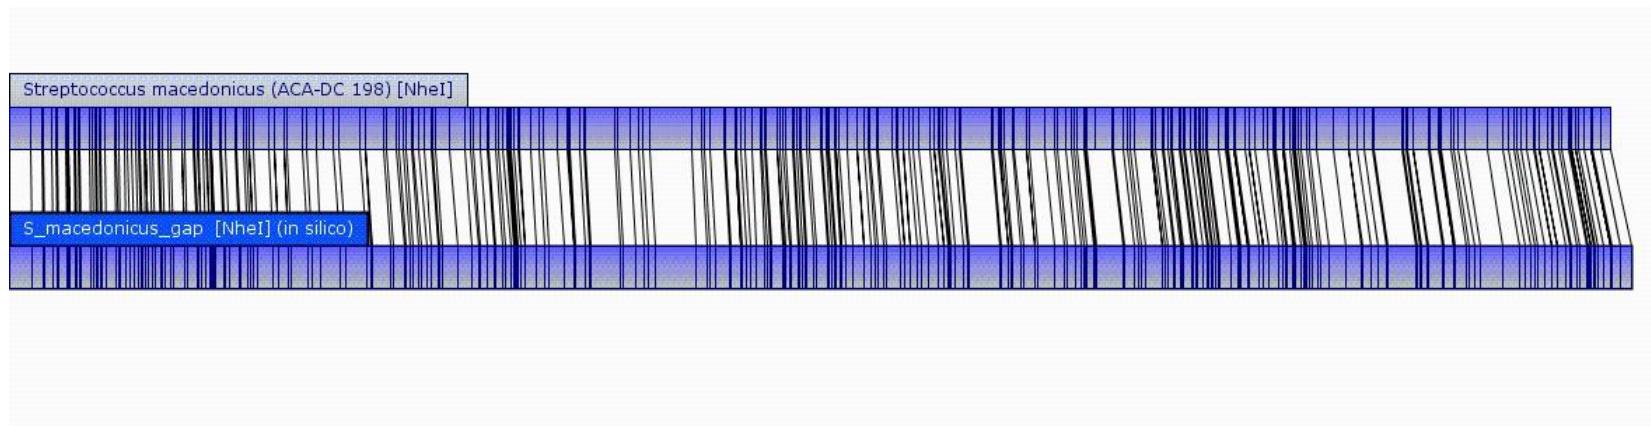

**C. Assessing the adaptation of *S. macedonicus* to the milk environment**

**D. Assessing the pathogenic potential *S. macedonicus***

# Complete genome sequencing and annotation of *S. macedonicus*

- 1<sup>st</sup> step: shotgun pyrosequencing with 454 GS-FLX titanium (>100 contigs)
- 2<sup>nd</sup> step: 3kb paired-end pyrosequencing with 454 GS-FLX titanium (7 scaffolds)
- 3<sup>rd</sup> step: gap-closure and polishing with Illumina sequencing using the HiSeq 2000
- 4<sup>th</sup> step: validation of the overall assembly (>200X coverage) with an *NheI* optical map

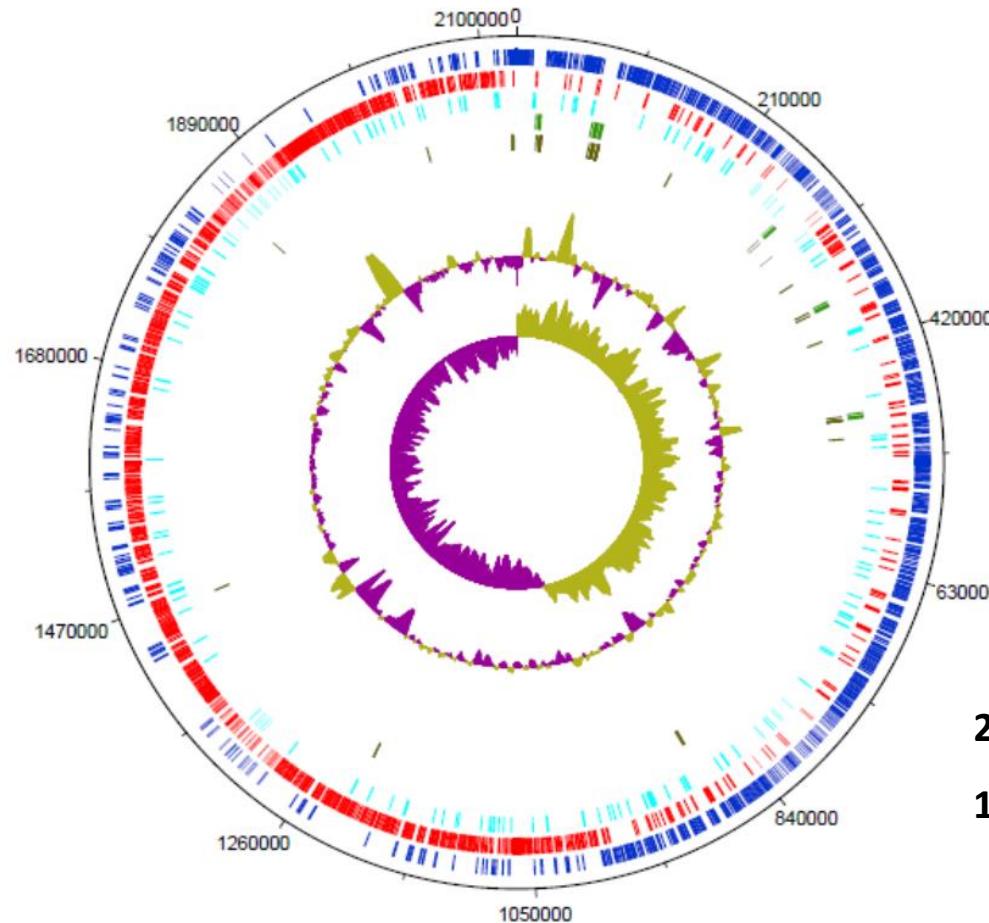

Chromosome: 2,130,034 bp

Plasmid: 12,728 bp (pSMA198)

# Complete genome sequencing and annotation of *S. macedonicus*

- Annotation was performed with the BaSys and the RAST pipelines and Kodon software
- Final corrections and quality assessment was performed using GenePRIMP

2,192 protein coding genes

192 potential pseudogenes

18 rRNA genes

70 tRNA genes

Papadimitriou et al. J Bacteriol. 2012

8th Conference of the Hellenic Society for Computational Biology and Bioinformatics (HSCBB13)

Department of computer Science and Biomedical Informatics, University of Thessaly, Lamia, Greece, 22-11-2013

# **Assessing the adaptation to milk and the pathogenic potential of the dairy *Streptococcus macedonicus* ACA-DC 198 through comparative genomics**

**A. Complete genome sequencing and annotation of *S. macedonicus***

**B. Comparative genomics of *S. macedonicus* against related streptococci**

**C. Assessing the adaptation of *S. macedonicus* to the milk environment**

**D. Assessing the pathogenic potential *S. macedonicus***

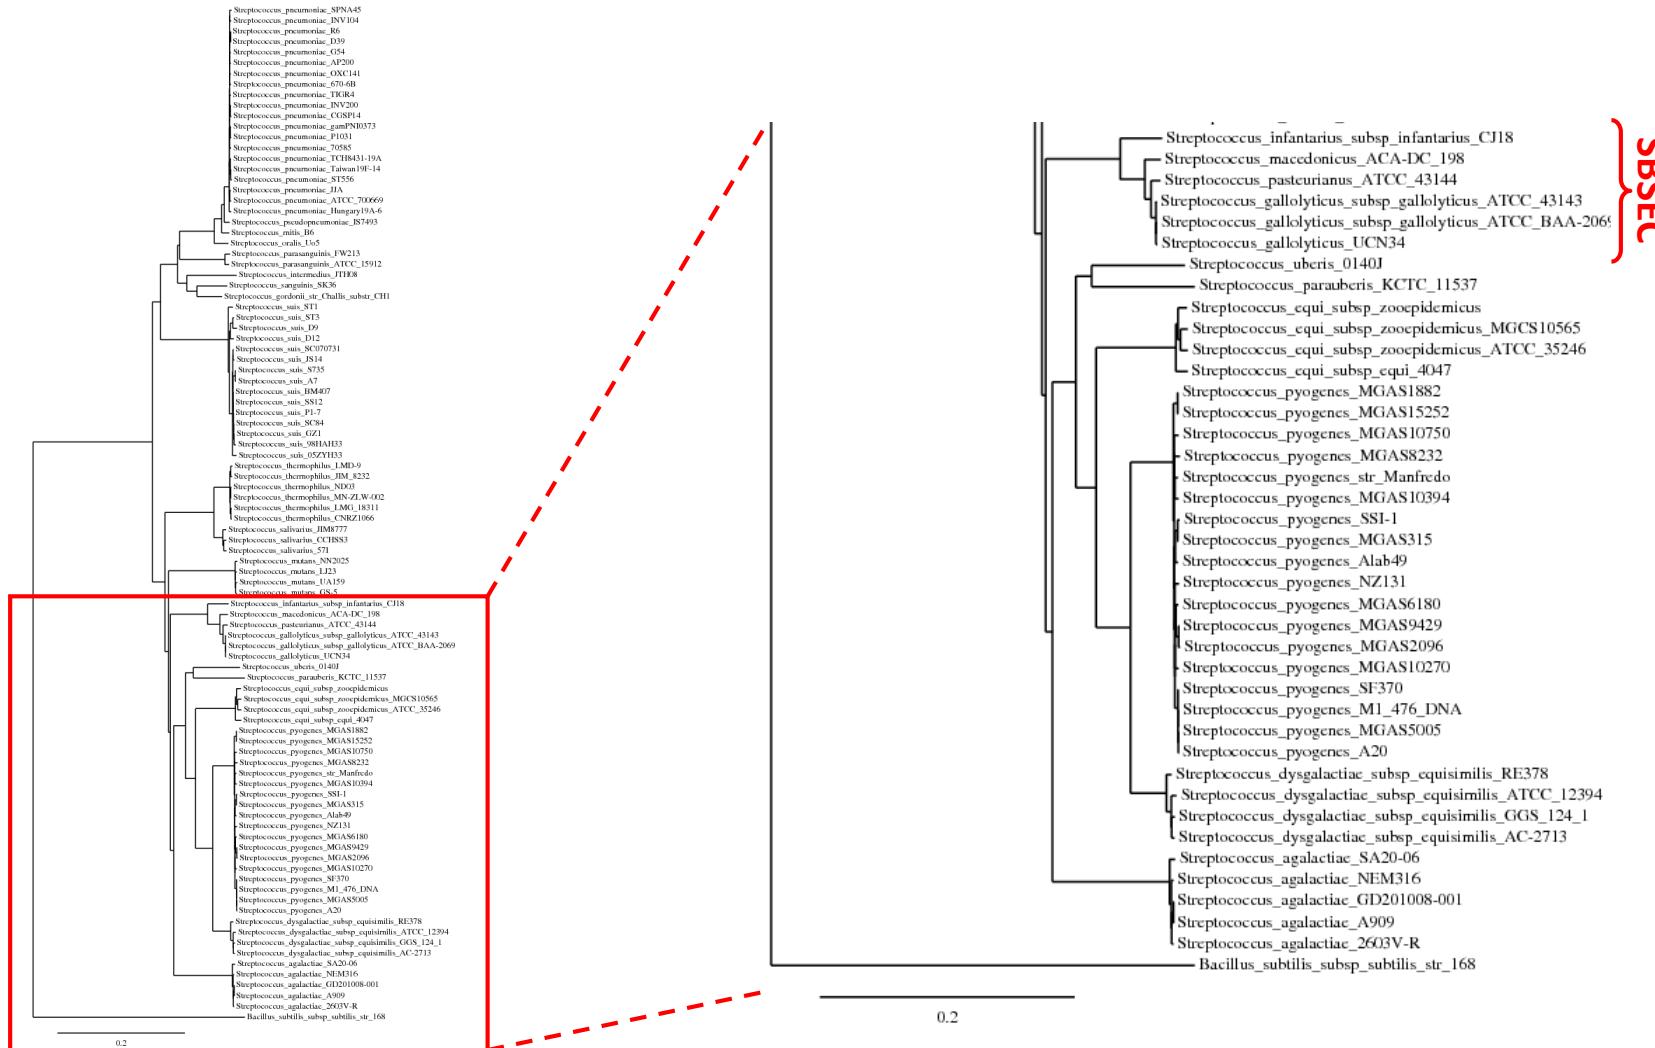

# **Comparative genomics of *S. macedonicus* ACA-DC 198 against related species within the *S. bovis/S. equinus* complex**

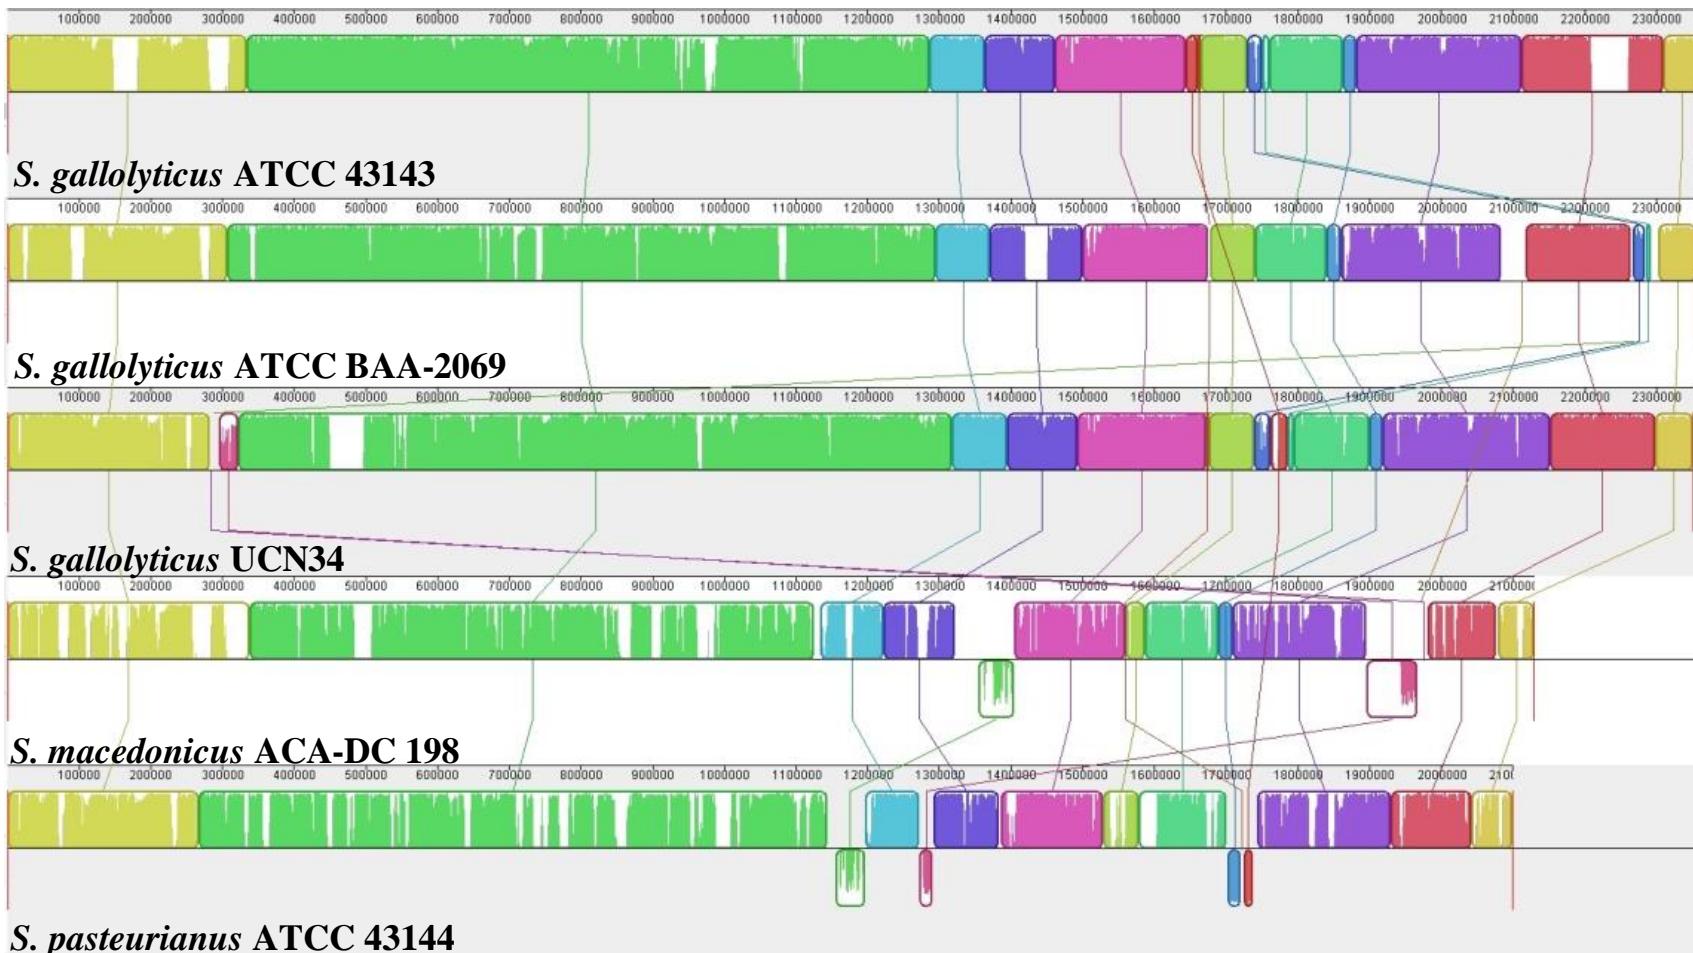

In the SBSEC there are currently five additional complete genome sequences available:

- *S. gallolyticus* UCN34 (human blood)
- *S. gallolyticus* ATCC BAA 2069 (human blood)
- *S. gallolyticus* ATCC 43143 (human blood)
- *S. pasteurianus* ATCC 43144 (human blood)
- *S. infantarius* CJ18 (suusac fermented camel milk)

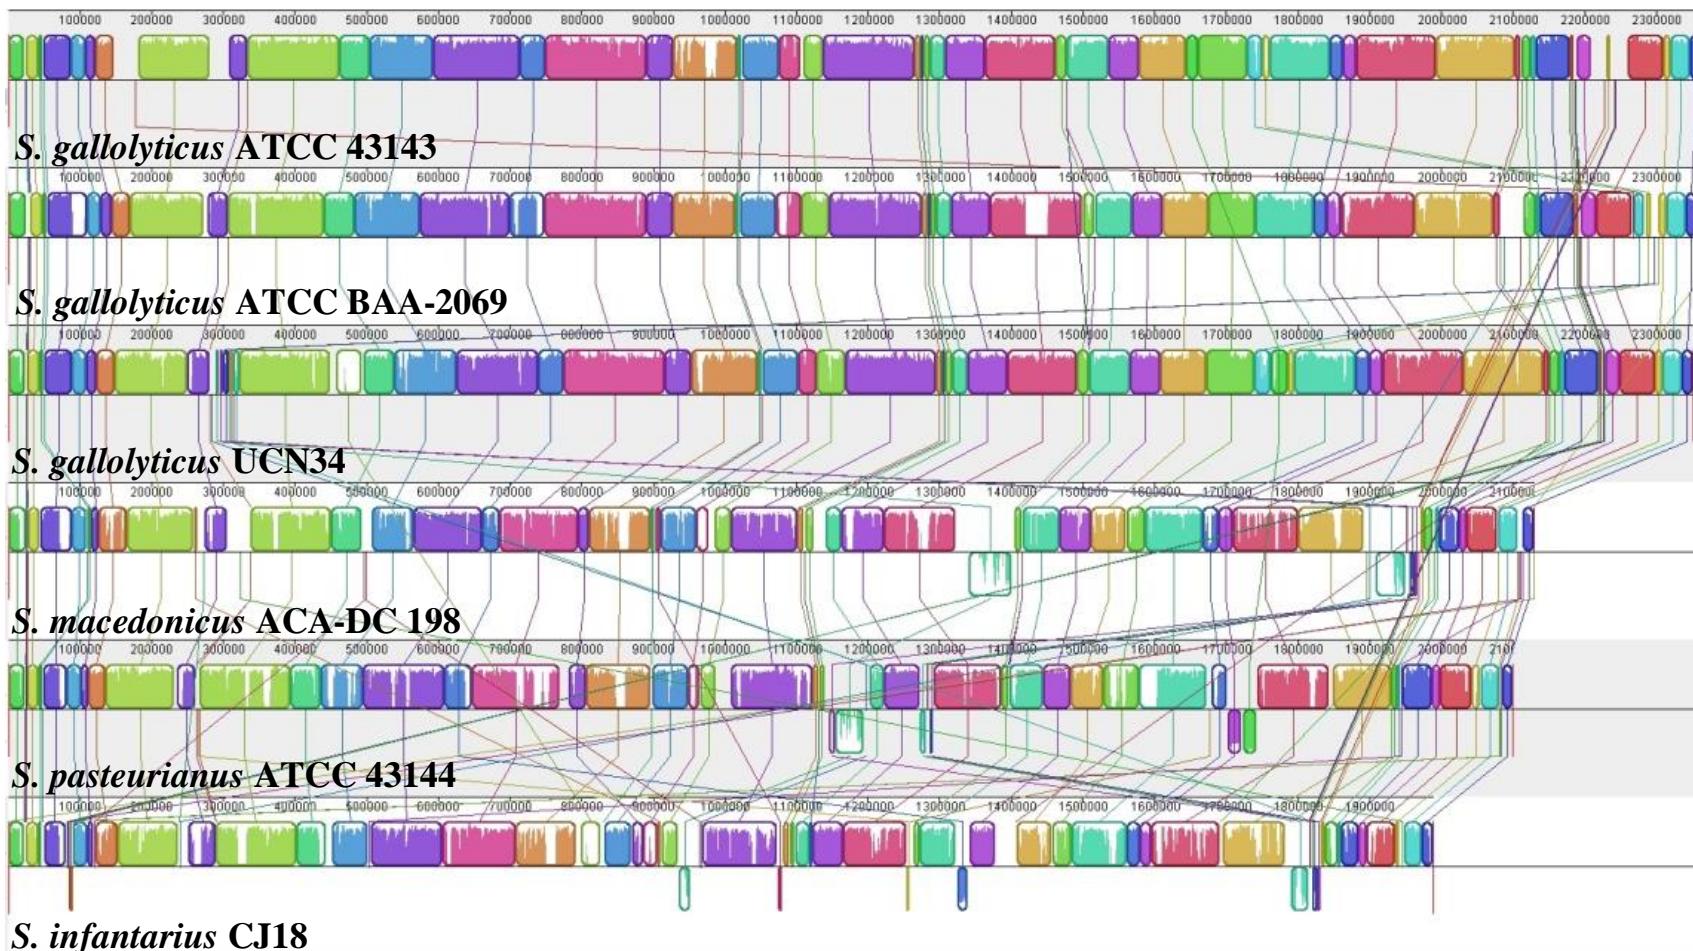

# Comparative genomics of *S. macedonicus* ACA-DC 198 against related species within the *S. bovis/S. equinus* complex

# Comparative genomics of *S. macedonicus* ACA-DC 198 against related species within the *S. bovis/S. equinus* complex

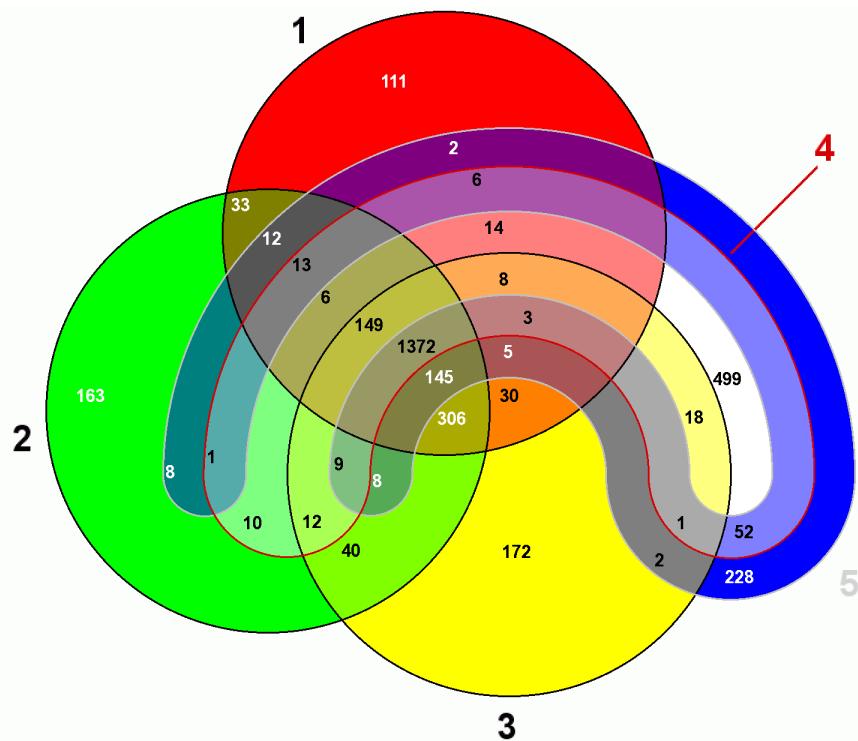

# Comparative genomics of *S. macedonicus* ACA-DC 198 against related species within the *S. bovis/S. equinus* complex

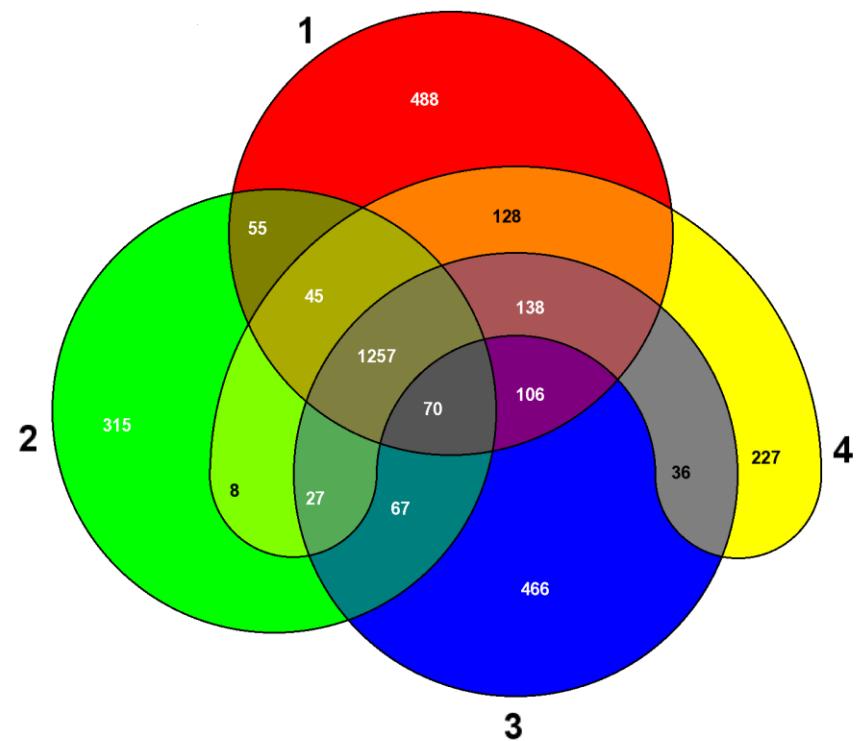

# Comparative genomics of *S. macedonicus* ACA-DC 198 against related species within the *S. bovis/S. equinus* complex

# Comparative genomics of *S. macedonicus* ACA-DC 198 against related species within the *S. bovis/S. equinus* complex

- Some additional characteristics of the genomes under investigation

Species	Genome size (Mb)	No. of protein coding genes	No. of potential pseudogenes/ (% percentage)
<i>S. gallolyticus</i> ATCC BAA 2069	2.35	2329	nr*/(nr)
<i>S. gallolyticus</i> ATCC 43143	2.36	2287	41(1.8)
<i>S. gallolyticus</i> UCN34	2.35	2251	28/(1.2)
<i>S. macedonicus</i> ACA-DC 198	2.13	2192	192/(8.7)
<i>S. pasteurianus</i> ATCC 43144	2.10	1869	157/(7.7)
<i>S. infantarius</i> CJ18	1.98	1964	nr/(4.6)

\* not reported

1. *S. macedonicus*, *S. pasteurianus* and *S. infantarius* genomes are being shaped by selective pressures that favor extensive gene loss events and genome decay processes when compared to the *S. gallolyticus* genome
2. This property (i.e. genome decay) has been linked to the adaptation of bacteria to rich in nutrients environments as in the case of *S. thermophilus* adaptation to the milk environment

## Conclusions

- 1. *Streptococcus macedonicus* is evolving under genome decay processes suggesting adaptation to a rich in nutrients environment**
- 2. Our analysis supports that the species shows traits of adaptation to the dairy environment**
- 3. Even though *S. macedonicus* shows a diminished pathogenic potential compared to *S. gallolyticus*, several pathogenicity traits are still conserved**

**Functional analysis needed!!!**

**This work was performed in collaboration with:**

- Prof. Stavros Hamodrakas
- Dr. Bruno Pot
- Dr. Philippe Supply

## Acknowledgments

**The present work was cofinanced by the European Social Fund and the National resources  
EPEAEK and YPEPTH through the Thales project**

# Thank you for your attention!!!
